

```
#include <stdio.h>
int main()
{
    int start, end, num, originalNum, remainder, result;
    scanf("%d", &start);
    printf("Enter the ending number of the range: ");
    scanf("%d", &end);
    printf("Armstrong numbers between %d and %d are:\n", start, end);
    for (num = start; num <= end; num++)
    {
        originalNum = num;
        result = 0;
        while (originalNum != 0)
        {
            remainder = originalNum % 10;
            result += remainder * remainder * remainder;
            originalNum /= 10;
        }
        if (result == num)
        {
            printf("%d ", num);
        }
    }

    printf("\n");
    return 0;
}
```
