

```
#include <stdio.h>
int main()
{
    int n;
    int t1 = 0, t2 = 1;
    int nextTerm = 0;
    printf("Enter the position (n) of the Fibonacci term: ");
    scanf("%d", &n);
    if (n == 1)
    {
        printf("The 1st Fibonacci term is: %d\n", t1);
    }
    else if (n == 2) {
        printf("The 2nd Fibonacci term is: %d\n", t2);
    }
    else
    {
        for (int i = 3; i <= n; ++i)
        {
            nextTerm = t1 + t2;
            t1 = t2;
            t2 = nextTerm;
        }

        printf("The %dth Fibonacci term is: %d\n", n, t2);
    }

    return 0;
}
```
